Results-driven Full-stack Developer with 9+ years of experience specializing in Node.js, golang, React.js, PostgreSQL, MongoDB, and Express. Proven expertise in developing robust and scalable applications, leveraging modern web technologies to deliver highquality software solutions. Experience Text2Query.ai Founder https://text2query.ai Architected and deployed full-stack SaaS platform enabling natural language to SQL conversion using React, TypeScript, TanStack Router, and Express.js backend with PostgreSQL, serving AI-generated queries with 95%+ accuracy across multiple LLM providers (OpenAI, Anthropic, Google AI, DeepSeek) • Engineered secure backend API with AES-256-GCM encryption for database credentials and role-based access control using Drizzle ORM and Better Auth with session management • Implemented subscription monetization system integrating Polar payment gateway with Better Auth, webhook-driven subscription lifecycle management, and customer portal for self-service billing • Built production-ready DevOps pipeline with Docker multi-stage builds, GitHub Actions CI/CD for automated deployments, health check monitoring on self-hosted Dokploy infrastructure (Hostinger KVM 4) • Developed advanced data visualization and export system with

generation and memory management

October 2025 - present

Mumbai, India

management and privacy controls Freelancer November 2024 - present Senior Software Engineer Remote, India Developed a customizable leave policy engine and leave request system which can handle multiple countries and leave policies. • Built an AI based natural language-to-SQL tool that empowered managers to self-serve reports, reducing SQL request turnaround time by 90%. • Developed a Go-based TUI tool that automated local deployment of project services (PostgreSQL, Redis, RabbitMQ) via Docker, seeded databases, provisioned queues, and provided devs with ready-to-use connection details—accelerating onboarding and reducing setup time. • Built a system to auto-fetch public holidays for a given country and year, generating calendars and toil day mappings as per leave policy—

streamlining HR operations and reducing errors.

Job&Talent

Senior Software Engineer

Enabled seamless HR-to-payroll integration, reducing payroll

processing time and human errors by automating transfer of critical

Researched and documented working of multiple payment providers

September 2023 - November 2024

Remote, India

May 2022 - May 2023

Remote, India

interactive charts (bar, line, pie, area) using Recharts, and multi-

format export capabilities (CSV, Excel, PDF, JSON) with client-side blob

Optimized application for SEO with comprehensive meta tags, Open

Graph/Twitter Cards, structured data, sitemap/robots.txt, achieving

production-ready performance with GDPR-compliant cookie

Defining Entity Relationship diagrams and API docs for features Lead the integration of payment provider in our application defining epics with stories spikes etc in jira. worked on defining and consuming kafka events. Delivered placements and contracts APIs for both the workers and back office. Implemented hexagonal architecture in node and kotlin Designed dashboards on datadog and integrated rollbar for error

like stripe, nuvei, transfer wise etc

tracking and monitoring.
